Startups

Driverless post buses will soon be operating in the canton of Valais, thanks to a new collaboration between PostBus and a Swiss startup founded by recent graduates from the Swiss Federal Institute of Technology (EPFL) in Lausanne.

- New study to assess drone use in Swiss life (16 Oct 15)
- Swiss postal service shows off delivery drone (07 Jul 15)
- Swiss Post tests SMS mobile letter stamp (02 Sep 13)

In what is a first for Switzerland's public transport system, two new autonomous buses sporting PostBus's distinctive yellow livery will be put in service in Sion during a two-year test period from spring 2016.

The electric-powered vehicles will be able to carry nine passengers at a time and will be in service in tourist zones in Sion's Old Town.
